VILDAGLIPTIN

Vildagliptin, a member of the islet enhancer class, is a **potent and selective dipeptidyl-peptidase-4 (DPP-4) inhibitor** that improves glycemic control. Vildagliptin inhibition of DPP-4 results in increased fasting and postprandial endogenous levels of the incretin hormones GLP-1 (glucagon-like peptide 1) and GIP (glucose-dependent insulintropic polypeptide).

METFORMIN

Metformin hydrochloride **decreases hepatic glucose** production, decreases intestinal absorption of glucose and **improves insulin sensitivity** by increasing peripheral glucose uptake and utilization. Metformin hydrochloride **stimulates intracellular glycogen synthesis** by acting on glycogen synthase and increase the transport capacity of specific types of membrane glucose transporters (GLUT-1 and GLUT-4).
